

Explanation of the DNM online cable shop system

Our web site is arranged so that we do not need to display all the cable lengths and the plug combinations that customers might need.

Instead to place an order it is always necessary to order the required type/amount of DNM stereo cable first, and then order the plugs (if required) or order the construction service to have the cable made-up.

To buy the parts and make your own cable

Instead we arrange that you can order the stereo cable length needed (in half metre measures to specify the cable length to within +/- one half of a metre) on this link <http://www.dnm.co.uk/acatalog/Cables.html>

and then if you wish you can separately order the plugs on this link <http://www.dnm.co.uk/acatalog/Plugs.html>

This method of ordering will enable you to buy the parts to build your own cable, soldering on the plugs yourself.

To order the cable ready-made

If you prefer to have your cable supplied with the plugs already fitted by DNM, you first need order the length of the required cable type on this link <http://www.dnm.co.uk/acatalog/Cables.html>

Then, instead of ordering the plugs, use the DNM construction service to have the cable assembled with plugs ready to use). The construction service section can be found on this link <http://www.dnm.co.uk/acatalog/PlugShop.html>

The DNM construction service shows the combinations of plugs with DNM cable type. Because there are only three types of DNM Stereo Solid Core cable this is quite simple to use. Photos of the plugs are shown against the cable type because they are included in the price of the assembly.

For example as the DNM cable is a stereo ribbon, you need only one length of it to make a stereo connection, so you need to put "1" in the quantity box to make one cable with the chosen plugs. If you need 4mm speaker plugs you will receive the stereo cable made up with the eight 4mm plugs shown in the photo.

For the second example if you want to make a bi-wire set of speaker cables you would put "2" in the construction service quantity box after having ordered enough cable for the two bi-wire runs. If you are unsure the please confirm your requirements with an email.

For the third example if you want an interconnect cable made with phono plugs at both ends, after ordering the cable length needed, select the type of plugs from the list on the construction service page. If you order "1" in the quantity box you will receive one stereo cable with four of the phono plugs (of the type you have selected) fitted.
