

When ordering DNM Stereo cables two points should be remembered :

- 1) The cables have four conductors in the ribbon, so cable orders are always made in stereo lengths.**

If required the stereo ribbon can easily be separated.

- 2) To enable the cable length to be specified to within half a metre, the entry in the quantity box is in half-metres.**

So to receive **5 metres** of cable, enter **10** in the **quantity** box.

The extra order flexibility this system offers may cause confusion when ordering non-standard cables (like balanced interconnects and bi-wired speaker cables). For this reason, some examples of cable order quantities versus required cable length are shown below.

The cable quantities needed for various lengths of DNM Stereo Solid Core cable

Interconnect cables

To order 1 half metre long DNM Stereo Solid Core Interconnect cable

Enter **1** in the interconnect cable quantity box

To order 1 one metre long DNM Stereo Solid Core Interconnect cable

Enter **2** in the interconnect cable quantity box

To order 2 one metre long DNM Stereo Solid Core Interconnect cables

Enter **4** in the interconnect cable quantity box

To order 1 stereo set of one metre long XLR-to-XLR balanced DNM Stereo Solid Core Interconnect cable

Enter **4** in the interconnect cable quantity box (because one four-conductor ribbon is dedicated to each channel)

Speaker cables

To order 1 stereo set of five metre long DNM Stereo Solid Core “Precision” cable or “Speaker” cable

Enter **10** in the appropriate cable type quantity box

To order 1 stereo set of five metre long *bi-wired* DNM Stereo Solid Core “Precision” cable or “Speaker” cable

Enter **20** in the appropriate cable-type quantity box
